

Problem-Solution Fit Canvas

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] • Bank Credit Analysts under pressure to meet SLA underwriting targets. • Compliance Officers ensuring portfolio defaults remain low. • Retail Banking Customers checking pre-qualification limits.	6. CUSTOMER LIMITATIONS [CL] • Operations: Underwriters must access scoring via local bank systems. • Compute: Limited computing resources to train heavy machine learning models.	5. AVAILABLE SOLUTIONS [AS] • Manual inspections (Very slow, high error rates). • Simple cut-off guidelines (Inflexible, high rejection rates).
2. PROBLEMS / PAINS [PR] • Processing Backlogs: Slow manual reviews of credit profiles (High Frequency). • Credit Score Drops: Customer score drops due to hard pull inquiry rejections. • Defaults: Slip-through delinquency histories.	9. PROBLEM ROOT / CAUSE [RC] • Daily application volumes exceed manual reviewing staff capacity. • Multi-class delinquency records are not automatically validated as hard override rules.	7. BEHAVIOR + INTENSITY [BE] • Analysts double-check borderline scores (Medium-High Intensity) out of fear of defaulting accounts.
3. TRIGGERS TO ACT [TR] • Underwriting SLA bottlenecks. • Increased portfolio default rates. • Compliance warnings on delinquencies.	10. YOUR SOLUTION [SL] An end-to-end intelligent credit scoring system featuring: • API Platform: Flask server running models in under 50ms. • Compliance overrides: Automatically converting status codes 1-5 to binary overrides. • Explainable UI: Dial charts and positive/negative contribution lists. • Stepped Wizard: Pre-qualification checks bypassing credit scoring hits.	8. CHANNELS OF BEHAVIOR [CH] ONLINE: • Desktop web browser dashboard consoles (Flask/JavaScript API integration). OFFLINE: • Local mock simulation controllers if backend Flask API goes down.
4. EMOTIONS BEFORE / AFTER [EM] • <i>Before:</i> Overwhelmed by backlogs, anxious about approvals, and stressed. • <i>After:</i> Reassured by auto-rejections, and supported by explainable AI dial weights.
