

Empathy Map

Date	2 July 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

SAYS 'I need to review over 50 applicant profiles before the end of my daily shift to meet department SLA standards.' 'Digging through credit delinquency codes manually is very tedious and slows down card processing.' 'I wish the system could automatically flag risk variables and highlight why a candidate is rejected.'	PERSONA NAME <i>(Role / User Type)</i> Junior Credit Risk Analyst Evaluates retail banking credit cards eligibility and audits portfolio risk parameters.	THINKS 'If I rush my review to clear backlogs, I might approve a high-risk applicant who defaults.' 'Many demographic checks and ratio calculations can easily be automated by a machine learning model.' 'I need model explainability indicators (risk factor weights) to confidently justify loan recommendations to auditors.'
DOES - Cross-checks applicant income levels, DTI ratios, and active loan counts manually using Excel worksheets. - Looks up multi-class payment status registers to detect credit delinquency history codes. - Coordinates with compliance managers to handle application overrides.		FEELS - Overwhelmed by peak seasonal application workloads and high queue backlogs. - Worried about missing compliance guidelines or approving fraudulent/default-prone cardholders. - Satisfied when utilizing model explanations that clarify scoring outputs.

Empathy Analysis and Persona Insights:

By mapping the Credit Analyst persona, we uncover critical design considerations. First, the user's primary pain point is processing speed combined with decision accuracy. This justifies our development of a REST API capable of scoring applicants in milliseconds. Second, the user has a psychological need for safety (fear of bad debt approval), which we satisfy by implementing rule overrides (rejecting delinquency histories) and visualizing positive/negative contribution indices. This aligns our machine learning engine directly with user operational expectations.
