

Code-Layout, Readability and Reusability Standards

VANGUARD CREDIT AUTOMATION | ACADEMIC PROJECT TRACK DELIVERABLE

1. Directory Layout Standards

Source code is isolated in the '5. Project Development Phase' directory. Web templates are placed in 'templates/' and scripts in 'static/' to separate structural logic from style scripts.

2. Reusability Features

Categorical mapping variables and StandardScaler weights are saved into 'preprocessor.pkl'. This ensures the application routes use identical coefficients used during model training, preventing training-serving skew.
